## Portfolio Objectives

The portfolio's primary objective is to grow capital over the long-term, while limiting the downside during times of adverse market movements. In addition, the portfolio aims to generate a reasonable level of income, either for distribution to investors or reinvestment.

To meet these objectives and create wealth for investors, the portfolio invests in a combination of growth and income producing investments, according to stringent risk management principles. While the long-term objective is to grow the real value of investor capital, markets are volatile and the portfolio's short-term performance may deviate from the benchmark.

## Fees

An annual portfolio management fee, based on the net asset value of the portfolio, is charged monthly.

Brokerage is charged per transaction within the portfolio, it is applicable to all purchases and sales of holdings.

## Investor Suitability

The portfolio is suitable for investors who:

- pursue long-term capital growth at a moderate level of risk (ie: are comfortable with some market fluctuation, but less than an equity portfolio would exhibit);
- require an income from their investment portfolio, either currently or in future; and
- have an investment horizon of at least 5 years.

## Performance Net of Fees and Expenses

|                                      | Since Launch | Latest 5 Years | Latest 3 Years | Latest 1 Year | YTD  |
|--------------------------------------|--------------|----------------|----------------|---------------|------|
| Portfolio                            | 114.1%       | 72.4%          | 37.7%          | 15.0%         | 4.7% |
| Benchmark                            | 76.5%        | 59.6%          | 28.6%          | 8.8%          | 6.4% |
| (ASISA) South African MA High Equity | 102.8%       | 64.7%          | 41.6%          | 11.0%         | 2.4% |

### Annualised

|                                      |       |       |       |       |
|--------------------------------------|-------|-------|-------|-------|
| Portfolio                            | 12.9% | 11.5% | 11.3% | 15.0% |
| Benchmark                            | 9.5%  | 9.8%  | 8.7%  | 8.8%  |
| (ASISA) South African MA High Equity | 12.0% | 10.5% | 12.3% | 11.0% |

ASISA classifies South African regulated collective investment scheme portfolios (CIS portfolios) using a three-tier system, focusing on geographical exposure, underlying asset classes, and investment focus.

South African Portfolios invest at least 55% of their assets in South African investment markets. Multi-Asset (MA) Portfolios invest in a combination of asset classes, namely: equity, property, fixed income and money market instruments. High, Medium and Low refers to the Equity weight within the investment, with Medium representing a traditional Balanced Fund's exposure of approximately 60%.

Inflation metrics contained within benchmark calculations are based on the most recent available data as published.

Pyxis Investment Management (Pty) Ltd is an authorised Financial Service Provider, FSP no. 662

Performance has been calculated net of fees. Past investment returns are calculated using back tested model portfolios since 1 June 2020. Any historical returns, modelling or back-testing are not to be seen as a guide to or guarantee of future returns and individual client portfolio performance will differ to the fact sheet due to investment timing and minor variations in actual portfolio holdings over time. Historical data and market assumptions used in data construction are used as indicators only. Benchmarks are probability indicators for targeting and assessment purposes and are not guaranteed. Pyxis Investment Management (Pty) Ltd does not predict results, performances and/or financial returns and gives no assurances, representations, warranties or guarantees in this regard. Portfolios may involve a high degree of risk including, but not limited to, the risk of low or no investment returns, capital loss, adverse or unanticipated financial market fluctuations and inflation. The value of the portfolios may fluctuate daily as a result of these risks.

| Investment Trusts/Mutual Funds | 8.1%   |
| Non-Energy Minerals            | 7.2%   |
| Technology Services            | 4.6%   |
| Consumer Non-Durables          | 4.3%   |
| Consumer Durables              | 3.8%   |
| Process Industries             | 3.2%   |
| Retail Trade                   | 3.1%   |
| Electronic Technology          | 2.0%   |
| Communications                 | 1.4%   |

| Top 10 Holdings                | Weight |
|--------------------------------|--------|
| Satrix GOVI ETF                | 11.4%  |
| Offshore Cash                  | 7.1%   |
| Domestic Cash                  | 6.6%   |
| Prosus N.V. Class N            | 3.9%   |
| BHP Group Ltd                  | 2.8%   |
| NEW GOLD ISSUER LTD.           | 2.7%   |
| Anglo American plc             | 2.7%   |
| Standard Bank Group Limited    | 2.6%   |
| iShares Global Inflation Linke | 2.6%   |
| Attacq Limited                 | 2.5%   |

The portfolio is managed according to a strategic asset allocation of 60% equities, 40% fixed income/property/other. The portfolio will exhibit tactical deviations from its strategic asset allocation from time to time due to geopolitical, macroeconomic and other factors prevalent at the time.

## Risk Measure Definitions

*Risk free rate*  
We are currently using 4.8% as the risk-free rate in the risk measures alongside.

*Standard deviation*  
Measures the historical dispersion of rolling returns from the expected, or long-term average return.

*Downside risk*  
Measures the financial risk associated with portfolio losses, the potential loss of the portfolio.

*Sharpe ratio*  
Ratio of the portfolio's return in relation to the risk-free rate per unit of volatility. Measures the portfolio manager's ability to generate returns in excess of the risk-free rate, taking the manager's consistency into consideration.

*Information ratio*  
Ratio of the portfolio's return relative to the benchmark return per unit of volatility. Measures the portfolio manager's ability to generate excess returns relative to a benchmark, taking the manager's consistency into consideration.

*Sortino ratio*  
Measures the risk adjusted return of the portfolio. Ratio of the portfolio's return in relation to the risk-free rate per unit of downside volatility.

*Maximum drawdown*  
Measures the largest peak-to-trough decline in the value of the portfolio, before a new peak is achieved.

*Gain/Loss ratio*  
Ratio of positive returns to negative returns. A measure of downside risk.

*Tracking error*  
Measures the deviation of the portfolio's return from the benchmark's return.

## Risk Measures

|                                                  | Portfolio | (ASISA) South African MA High Equity |
|--------------------------------------------------|-----------|--------------------------------------|
| Annualised Volatility                            | 8.5%      | 6.8%                                 |
| Downside Volatility                              | 10.0%     | 7.0%                                 |
| Gain / Loss Ratio                                | 1.2       | 1.0                                  |
| Maximum Time in Drawdown (months)                | 6.0       | 7.0                                  |
